

## DRAFT Agenda

### Proposed Session for Extended Public Comment on the Review of Vermont's Greenhouse Gas (GHG) Inventory by Technical Consultants for the Vermont Climate Council

Purpose: Identify and surface available resources and relevant information, along with any outstanding key questions, in support of technical consultant review of Vermont's GHG Inventory

June 30<sup>th</sup>, 2021

- |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1:30 - 1:35 | Welcome and Introduction (Science & Data Subcommittee Co-Chairs TJ Poor & Jared Duval)                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1:35 – 1:40 | Context setting (Jane Lazorchak, GWSA Director, and ANR Secretary Julie Moore)                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1:40 – 2:00 | Overview of tasks, deliverables, and planned timeline for GHG Inventory review (Technical Consultants)                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2:00 – 3:00 | Public Comment and Discussion on Task 1a: “Review of current Inventory data and factor inputs for tools and methodologies and methodological choices where appropriate, including: <ul style="list-style-type: none"><li>- Emissions factors and datasets utilized for each source of emissions</li><li>- The choice of GWP value (i.e. GWP20; GWP100); and</li><li>- Emissions calculations methodologies used for each sector as appropriate”</li></ul>                                                                                            |
| 3:00 - 3:05 | Break                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3:05 – 3:50 | Public Comment and Discussion on Task 1b: “Assess the feasibility of and options for supplementing Vermont’s current in-boundary/sector-based inventory methodology with a lifecycle and/or consumption-based emissions inventory, either for economy wide consumption (as Oregon and Minnesota have done) or limited to life-cycle analysis of energy related emissions (as called for in 10 V.S.A. 582). Identify likely costs, timelines, and key considerations for implementation of supplemental life-cycle emissions accounting methodology.” |
| 3:50        | Other public comment/ discussion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 4:00        | Adjourn                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
